18

## CLAIMS.

5

- 1. A method for preparing a supported catalyst component comprising the steps of:
  - a) providing a halogenated bisimine precursor component of formula (I)

10

(I)

- b) reacting the halogenated bisimine precursor with an ionic liquid precursor in a solvent to prepare an ionic liquid;
- c) reacting the ionic liquid prepared in step b) with a metallic precursor of formula (II)

$$L_2MY_2$$
 (II)

wherein L is a labile ligand, M is a metal selected from Ni o r Pd and Y is a halogen

d) retrieving a supported single site catalyst component.

20

15

- 2. The method of claim 1 wherein the ionic liquid precursor is N -alkylimidazolium or pyridinium.
- 3. The method of claim 1 or claim 2 wherein between step b) and step c), the reaction product of step b) is reacted with an ionic compound C <sup>+</sup>A<sup>-</sup>, wherein

C<sup>+</sup> is a cation selected from K<sup>+</sup>, Na<sup>+</sup>, NH<sub>4</sub><sup>+</sup>, and A<sup>-</sup> is an anion selected from PF<sub>6</sub>, SbF<sub>6</sub>, BF<sub>4</sub>, (CF<sub>3</sub>-SO<sub>2</sub>)<sub>2</sub>N, ClO4, CF<sub>3</sub>SO<sub>3</sub>, NO<sub>3</sub> or CF<sub>3</sub>CO<sub>2</sub>.

- 4. The method of any one of the preceding claims wherein the solvent used in steps b) and step c) is selected from THF, CH <sub>2</sub>Cl<sub>2</sub> or CH<sub>3</sub>CN.
  - 5. A catalyst component supported on an ionic liquid obtainable by the method of any one of claims 1 to 4.
- 10 6. A catalyst system supported on an ionic li quid comprising the catalyst component of claim 5 and an activating agent.
  - 7. The catalyst system supported on an ionic liquid of claim 6 wherein the activating agent is methylaluminoxane.

15

5

- 8. The catalyst system supported on an ionic liquid of claim 7 wherein the amount of methylaluminoxane is such that the Al/M ratio is of from 100 to 1000.
- 9. A method for homopolymerising or copolymerising alpha -olefins that comprises the steps of:
  - a) injecting the catalytic system supported on an ionic liquid of any one of claims 6 to 8 with an apolar solvent into the reactor;
  - b) injecting the monomer and optional comonomer into the reactor,
- 25 c) maintaining under polymerisation conditions;
  - d) retrieving the polymer under the form of chips or blocks.
  - 10. The method of claim 9 wherein the apola r solvent is n-heptane.
- 30 11. The method of claim 9 or claim 10 wherein the monomer is ethylene or propylene.

20

- 12. A polymer under the shape of chips and blocks obtainable by the process of any one of claims 9 to 11.
- 5 13. The polymer of claim 12 wherein the amount of c hips is of less than 25 wt%, based on the total weight of the polymer.
